

the *water lily*

Botanical name: Nymphaea sp.

Family: Nymphaeaceae

Common names: Water lily

Area of Origin: Asia, Australia

Available: October to April

Stem Length: 20 – 50 cm

These short-stemmed flowers are truly spectacular and are rarely seen as cut flowers. They grow in submerged soil, with the leaves and flowers floating on the water surface. Water lilies are divided into two main categories: hardy and tropical. Hardy water lilies bloom only during the day, but tropical water lilies can bloom either day or night. There are hundreds of different varieties, with flower colours ranging from white to cream, yellow to apricot, pink to red, and blue to mauve. There are miniature varieties with flowers that are about 6 cm in diameter and larger forms that bear flowers up to 15 cm in diameter. Flowers typically have 2 or more rings of petals, each made up of 10 to 15 waxy, pointed petals. The centre of each flower is often yellow, and contains the filamentous stamens and styles. Many varieties are fragrant. Stems are short.

When Buying Look for:

- Open flowers;
- Strong stems.

Flower Care

1. Do not need to be refrigerated.
2. Recut at least 2cm off each branch and place in water immediately.
3. Keep in water at all times, closed blooms may re-open when placed in water.
4. Always use a preservative as this will help open buds and maintain the open flowers.

Interesting Facts and Myths

The white water lily is the national flower of Bangladesh and is the birth flower for July.

did you know the *raceday* flower for the spring racing event "Emirates Stakes" is the red rose? *Emirates Stakes, Saturday, 10 November, Flemington*
