## WATER SAVING INITIATIVES - UPDATE

The MMA has successfully trialled a new product aimed at reducing potable water consumption in the Melbourne Market toilets, while maintaining a high level of hygiene, cleanliness and odour control.

The product is Desert Cubes, and trials conducted in the north centre way toilet block have proven to be very successful with a water saving of 64%! This equates to a water saving of up to 40 Million Litres per year if used across the whole site!!!

This product will now be implemented for use progressively across all urinals within the markets.

MMA is continuing to investigate other initiatives to reduce further our potable water consumption on site and seeks your continued support.

Any queries or suggestions regarding water saving initiatives can be directed to MMA's Environment Manager on 9258 6107.
